- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. This application is a 371 of PCT/IB03/04811, filed October 28, 2003.
2. Claims 1-12 are now pending.

Priority

3. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

4. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

5. The disclosure is objected to because of the following informalities:

Page 5, line 4: "beam splitter 200" should be --optical filter 200--.

Claim 11, line 6: "or regulating" should be --for regulating--.

Appropriate correction is required.
6. The specification is objected to because it lacks appropriate headings such as Background of the Invention, Summary of the Invention, etc.

Claim Rejections - 35 USC § 112

7. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

8. Claim 12 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential steps, such omission amounting to a gap between the steps. See MPEP § 2172.01. Claim 12 recites a method for regulating the intensity profile of a radiation beam, but does not include positively recited method steps.

Allowable Subject Matter

9. Claims 1-11 are allowed over the prior art of record.
10. Claim 12 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.
11. The following is a statement of reasons for the indication of allowable subject matter:

The closest prior art of record, Kimura (JP 11-168431) discloses an optical filter (Drawing 1, element 4) for regulating the intensity profile of a radiation beam, the filter comprising a saturable absorber having an absorption that saturates at a threshold incident radiation intensity (see abstract-solution). However, the invention of Kimura is directed towards an optical receiver wherein light from a semiconductor laser is transmitted using a transmission line, while the Applicant's invention is directed to an optical scanning device having a radiation source and an objective system for converging a radiation beam on an information layer. That is, Kimura does not disclose: in regard to claims 1, 8, 9, 11 & 12, that the filter has an optical axis, and that the absorber has an absorption that decreases with distance away from the optical axis for incident radiation beams of intensity less than the threshold.

Art Unit: 2627

Claims 2-7 & 10 are dependent upon base claims having allowable subject matter.

Conclusion

12. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ikeya et al. (US 5,572,500) disclose an optical filter with light transmittance dependency on an incidence angle.

Takahashi (US 6,480,455) discloses a wavelength selective filter wherein transmittance is high at low frequencies while transmittance decreases at frequencies above a certain threshold.

Kitamura et al. (US 6,930,962) disclose an optical information reading apparatus having a super-resolution cut-off filter.
